## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/17/08, has been entered.

### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance: In response to the final office action, dated July 18, 2008, further in view of applicant's amendment filed on 11/17/08, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks based on currently amended subject matter, as discussed in page 14 through 16, the argument has been found persuasive. The rejection has been withdrawn, and therefore, claims 1, 2-12 and 26-27 have been allowed, for the following reasons:

With respect to claims 1, 2 through 7, the prior art searched and of record neither anticipates nor suggests the claimed invention as amended. In particular, white balance processing means for effecting white balance processing on a taken image based on a set white balance value; non-volatile storage means for storing white balance values set for the taken image obtained in past image taking and employed in said white balance processing; custom value setting means for setting a white balance value employed in the past, stored in the storage means as a custom white balance value for the taken image by a new picture taking; detected value setting means for detecting and setting a white balance value to be set to said white balance processing means from the taken image; correction means for correcting said detected white balance value; and corrected detected value setting means for setting said corrected detected white balance value to said white balance processing means; wherein said storage means additionally stores said corrected detected white balance value set and employed at said white balance processing means as a white balance value employed in the past.

With respect to claims 8 and 9, the prior art searched and of record neither anticipates nor suggests a white balance processing apparatus comprising: white balance processing means for effecting white balance processing on a taken image based on a set white balance value; reproduction means for reading recorded image data for reproduction; selection means for selecting desired image data from a reproduced image; non-volatile storage means for storing a white balance value corresponding to said selected image data and employed in white balance processing of the image data and setting means for setting said white balance value stored in said

storage means as the white balance value for white balance processing on the taken image by a new picture taking, a white balance value corresponding to said selected image data and employed in white balance processing of the imago data.

Claims 10 and 11 are allowed, for the reason the prior art searched and of record neither anticipates nor suggests a white balance processing method comprising the steps of: storing a white balance value employed in white balance processing of a past taken image into a non-volatile memory; setting said stored white balance value employed in the past as a custom white balance value for the taken image by a new picture taking; and effecting white balance processing on the taken image based on said set custom white balance value; wherein said stored white balance value employed in the past is a white balance value detected from the taken image subjected to processing in the past and corrected based on an instruction from a photographer, and is the white balance value employed in white balance processing of the taken image.

With respect to claim 12, the prior art searched and of record neither anticipates nor suggests a computer-readable medium encoded with computer-executable white balance processing instructions including the procedures of: storing a white balance value employed in white balance processing of a past taken image into a non-volatile memory; setting said stored white balance value employed in the past as a custom white balance value for the taken image by a new picture taking; and effecting white balance processing on the taken image based on said set custom white balance value; wherein said stored white balance value employed in the past is a white balance value detected from the taken image subjected to processing in the past and corrected based

on an instruction from a photographer, and is the white balance value employed in white balance processing of the taken image.

With respect to claims 26 and 27, the prior art searched and of record neither anticipates nor suggests a digital camera, including a white balance processing apparatus, the apparatus comprising: white balance processing means for effecting white balance processing on a taken image based on a set white balance value; non-volatile storage means for storing white balance values set for the taken image obtained at the time of past image taking and employed in said white balance processing; custom value setting means for setting a white balance value employed in the past, stored in the storage means as a custom white balance value for the taken image by a new picture taking; detected value setting means for detecting and setting a white balance value to be set to said white balance processing means from the taken image; correction means for correcting said detected white balance value; and corrected detected value setting means for setting said corrected detected white balance value to said white balance processing means; wherein said storage means additionally stores said corrected detected white balance value set to and employed in said white balance processing means as a white balance value employed in the past.

Therefore, claims 1, 2-12 and 26-27, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention.
